

HR Analytics Dashboard: 2 Million Employee Workforce Study

This analysis explores a large-scale human resources dataset containing 2 million employee records spanning seven European countries and five departments. The data includes employee demographics, compensation, experience, performance ratings, work arrangements, and job levels. The goal is to uncover what drives pay differences, how the workforce is distributed, and how equally compensation is shared across the organization.

Key Findings at a Glance

The workforce exhibits a highly structured compensation system. Salary is overwhelmingly driven by experience, with a Pearson correlation of **0.924** between years of experience and pay. The IT department leads all others in average salary—not because its employees are more tenured, but because IT roles are simply priced higher at every job level. Income inequality across the workforce is moderate, with a **Gini coefficient of 0.269**, indicating systematic, role-driven differences rather than arbitrary pay gaps.

Workforce Distribution by Country

The United Kingdom holds the largest share of the workforce, followed by Germany and France. Poland has the smallest presence.

Country	Employees
United Kingdom	499,659
Germany	440,816
France	400,162
Spain	259,754
Italy	199,872
Netherlands	139,392
Poland	60,345

Salary Landscape by Department

IT commands the highest average salary at approximately **\$96,305**, followed closely by Finance at **\$94,219**. HR sits at the bottom with an average of **\$74,379**—a gap of nearly \$22,000 compared to IT.

Department	Average Salary
IT	\$96,305
Finance	\$94,219
Sales	\$91,217
Operations	\$84,680
HR	\$74,379

The reason IT leads is structural. Average experience is nearly identical across all departments (approximately 6.27 years), but IT pays more at every job level: **\$55,562** for Junior roles and up to **\$233,404** for Directors.

Performance Ratings and Work Mode

The majority of employees receive a **"Good"** rating, and the distribution is consistent across all work modes (On-site, Remote, and Hybrid).

Performance Rating	Hybrid	On-site	Remote
Excellent	52,343	164,396	82,105
Good	175,328	548,556	275,084
Needs Improvement	24,362	77,091	38,471
Satisfactory	97,920	307,498	153,513

Summary

This 2-million-record HR dataset tells a clear story: compensation is structured, predictable, and heavily influenced by experience and department. Performance ratings remain consistent

regardless of work arrangement. With a **Gini coefficient of 0.269**, the organization reflects organized pay bands rather than arbitrary disparities.
